Ireland s distributed energy storage electricity price difference

Overview

What is Ireland doing about energy cost competitiveness?

Ireland has committed to developing metrics of energy cost competitiveness as outlined in the Government's White Paper on Ireland's Transition to a Low Carbon Energy Future 2015-2030. We have developed average electricity and natural gas prices for business and households. These are based on the EU Electricity and Gas Price Regulation statistics.

Will Ireland need more energy storage?

With a target of 80% renewable electricity from intermittent sources on our grid by 2030, Ireland will require a significant amount of energy storage in the years to come.

Why are electricity costs so high in Ireland?

Our network costs are similar to those of other Member States. The relatively high price of our electricity in Ireland is attributed to our dependence on imported fossil fuels, particularly gas, and the costs of generation and supply, although transmission and distribution costs have increased year on year with greater investment.

How do electricity bills work in Ireland?

Electricity bills in Ireland are composed of several components: Wholesale Energy Cost: The base cost of electricity is set in the all-island Single Electricity Market (SEM), where generators bid into a mandatory pool. The marginal clearing price (System Marginal Price, SMP) at each half-hour becomes the wholesale rate.

What is Ireland's energy storage policy?

This is the first electricity storage policy published in Ireland. The Irish Government's Climate Action Plan 2021 set out the need for an energy storage policy for Ireland to support 75% reduction in power sector CO2

emissions by 2030.

How are Ireland's energy prices affecting final consumers?

Note: Due to the recent increases in energy prices, Ireland introduced measures to alleviate the burden on final consumers. Domestic electricity customers, including pay as you go customers, have received credits on their bills of €1,500 as: four payments of €200 in April 2022, November 2022, January 2023 and March 2023.
