Is energy storage battery in short supply

Overview

The demand for batteries is skyrocketing, but critical materials like lithium, nickel, cobalt, and graphite are in short supply. Why is battery storage important?

Battery storage has many uses in power systems: it provides short-term energy shifting, delivers ancillary services, alleviates grid congestion and provides a means to expand access to electricity. Governments are boosting policy support for battery storage with more targets, financial subsidies and reforms to improve market access.

Why should we invest in a battery supply chain?

Investments like this will provide positive signals to the supply chain and countries to position themselves as potential leaders in the energy transition and will help diversify and grow the battery supply chain.

How can EV battery shortages be prevented?

This article focuses on three key measures for preventing or responding to EV battery shortages: industrialization and scale-up of gigafactories, strategies to find and retain talent, and establishment of a robust and efficient supply chain.

How will the battery supply chain affect the future?

In fact, the battery supply chain risks facing a situation similar to the current semiconductor chip shortage, where demand growth has outstripped capital investment in new supply. Furthermore, environmental, social, and governance (ESG) factors will play a more significant role—raising another set of issues that companies need to address.

Why are batteries important?

Batteries are an important part of the global energy system today and are poised to play a critical role in secure and affordable clean energy transitions.

In the transport sector, they are the essential component in the millions of electric vehicles (EVs) sold each year.

How is battery overproduction affecting the energy storage industry in 2024?

Battery overproduction has been and continues to shape the market dynamics of the energy storage sector in 2024, placing downward pressure on pricing and providing headwinds for deployment. In particular, the rapid growth of battery manufacturing has surpassed immediate and short-term demand.
