Is pulling a battery storage container considered dangerous goods

Overview

These batteries are prone to fire, leakage, or short circuits, which is why they are classified as dangerous goods (DG) and are subject to strict transport regulations. Why are batteries classified as dangerous goods?

Because batteries are classified as dangerous goods due to fire and explosion risk. That means stricter packaging, labelling, documentation, and carrier approvals. This guide explains everything you need to know to stay compliant and avoid costly delays – from battery classifications to mode-specific rules and best practices for shipping safely.

Are lithium batteries dangerous goods?

Lithium battery products are classified as Class 9 dangerous goods and divided into several categories such as lithium batteries, lithium battery equipment, battery-powered vehicles, and Lithium Batteries Installed in Cargo Transport Unit.

What is a Dangerous Goods label for lithium batteries?

Except for containerized lithium-ion battery energy storage systems and vehicles powered by lithium batteries (pure electric or hybrid), packages containing lithium batteries or battery packs must be affixed with the 9A dangerous goods label as shown in Figure 4 or the lithium battery mark as shown in Figure 5, as required.

Do I need A Dangerous Goods Declaration If I ship batteries?

When shipping batteries with equipment, companies must include a maximum number of batteries needed to power the equipment along with two extra sets. If the total amount of cells is equal to or less than 20 watt-hours (Wh) and the batteries are equal to or less than 100 Wh, a Dangerous Goods Declaration (DGD) is not required.

Are lithium batteries class 9 dangerous goods?

Most lithium batteries are classified as Class 9 dangerous goods but the exact handling requirements depend on: Other battery types – like lead-acid, nickel-metal hydride (NiMH), and dry cell batteries — may fall under different categories, but all require proper classification, documentation, and packaging to move legally and safely.

Are wet batteries dangerous goods?

Wet batteries are commonly used in vehicles and industrial machinery such as car battery chargers and floor polishers, and generally contain corrosive acids or alkalis, and belong to Class 9 dangerous goods. Not all batteries are dangerous goods! Which batteries can be shipped as non-hazardous?
