Overview

Can Japan harness the potential of solar power?

Japan's efforts to harness the potential of solar power, a well-known renewable energy source, will shine a light on humanity's future. Japan is making steady progress toward the implementation of the groundbreaking technologies of both space-based solar power and flexible solar cells.

Can Japan beam solar energy from space?

Japan Aims to Beam Solar Power from Space: The OHISAMA Project and the Future of Clean Energy In a bold step toward redefining the global energy landscape, Japan is moving closer to a historic achievement: wirelessly transmitting solar energy from space to Earth.

Can Japan wirelessly transmit solar energy from space to Earth?

In a bold step toward redefining the global energy landscape, Japan is moving closer to a historic achievement: wirelessly transmitting solar energy from space to Earth. At the heart of this innovation is a satellite project called OHISAMA, a name which means "sun" in Japanese—a fitting symbol for a vision rooted in solar power and sustainability.

Can solar energy be used in Japan?

To maximize the use of solar energy and overcome those drawbacks, two promising technologies have been developed: space-based solar power (SBSP) and next-generation flexible solar cells. Japan is making steady progress toward the practical implementation of both.

How much does solar power cost in Japan?

It is found that Japan has sufficient solar PV, wind, and pumped hydro potential to support 100% renewable electricity and even 100% renewable energy. Importantly, a wide range of scenarios yield costs in the range US\$86–110/MWh which are competitive with current spot prices.

What is Japan's Energy Security?

The uptake of solar power and other renewables ties in with energy security. Japan's current energy mix centers on thermal power, so it is reliant on imports of fossil fuels like oil, coal, and natural gas. In fiscal 2021, Japan's energy self-sufficiency was just 13.3%, ranking it thirty-seventh among the 38 OECD members.
