# Latvian Communications 5G Base Station Photovoltaic Power Generation System Planning

#### **Overview**

Base station operators deploy a large number of distributed photovoltaics to solve the problems of high energy consumption and high electricity costs of 5G base stations. In this study, the idle space of the.

What is a 5G photovoltaic storage system?

The photovoltaic storage system is introduced into the ultra-dense heterogeneous network of 5G base stations composed of macro and micro base stations to form the micro network structure of 5G base stations.

Do 5G base stations use intelligent photovoltaic storage systems?

Therefore, 5G macro and micro base stations use intelligent photovoltaic storage systems to form a source-load-storage integrated microgrid, which is an effective solution to the energy consumption problem of 5G base stations and promotes energy transformation.

Can photovoltaic energy storage system reduce 5G energy consumption?

It also provides a way to solve the problem of 5G energy consumption. This paper puts forward a scheme to install photovoltaic energy storage system for 5G base station to reduce the power supply cost of the base station, compares it with the energy consumption cost of 5G base station in different situations, and analyzes the economy of the scheme.

Does a 5G base station microgrid photovoltaic storage system improve utilization rate?

Access to the 5G base station microgrid photovoltaic storage system based on the energy sharing strategy has a significant effect on improving the utilization rate of the photovoltaics and improving the local digestion of photovoltaic power. The case study presented in this paper was considered the base stations belonging to the same operator.

What is the energy storage planning capacity of large-scale 5G BS?

In Case 2, the total optimal energy storage planning capacity of large-scale 5G

BSs in commercial, residential, and working areas is 9039.20 kWh, and the corresponding total rated power is 1807.84 kW. The total energy storage planning capacity of large-scale 5G BSs in Case 3 is 7742 kWh, which is 14.35% lower than that of Case 2.

Are 5G base stations more energy efficient than 4G BSS?

However, due to the utilization of massive antennas and higher frequency bands, the energy consumption of 5G base stations (BSs) is much higher than that of 4G BSs, which incurs huge operation costs and significantly increases carbon emissions under traditional power supply mode.
