Lead-acid battery cabinet standard

Overview

Which accumulator batteries are included in the cabinets covered by the technical specification?

The cabinets covered by the technical specification have been designed to contain the hermetic lead-acid electric accumulator batteries.

What is a VRLA battery cabinet?

They are designed to accommodate standard Valve Regulated Lead Acid (VRLA) batteries with a capacity range of 24Ah to 105Ah (C10). The battery cabinets are available in five different mechanical dimensions.

What are the requirements for ventilation of battery rooms or cabinets?

Ventilation of battery rooms or cabinets shall be in accordance with with National Regulation and/or IEC/EN 62485-2. Internal resistance can be important to the equipment design and operation. The manufacturer shall state the value of internal resistance for a new battery. This item is covered by chapter 6.3 of IEC/EN 60896-21 and -22.

What are the requirements for a battery cabinet & enclosure?

Cabinets shall have natural or forced ventilation as specified. The ventilation fans shall be installed with a redundant (N+1) configuration. Within the cabinet or enclosure, batteries shall be accessible to permit inspection and maintenance of cells without any safety risk to personnel.

How many batteries can a battery cabinet support?

The battery cabinets are available in five different mechanical dimensions. They can facilitate multiple combinations of batteries, up to 63 battery blocks, connected in series and parallel configurations with positive, negative, and mid-point poles. The battery cabinets also support a maximum Direct Current (DC) voltage of 800Vdc.

What are the requirements for a battery installation?

1. Space Planning and Layout 900mm min Battery Room Layout 1200mm Primary Access End Access 1000mm Battery Racks Industrial battery installations require adequate spacing for maintenance, ventilation, and safety. The layout should accommodate: 2. Structural Requirements
