# Lightning protection for power supply of communication base station

#### **Overview**

The protection of GSM and base station towers from lightning and overvoltage is provided by integrating external lightning systems, internal lightning systems, earthing, equipotential bonding and LV surge arrester protection techniques within the framework of IEC-62305 standard. What is the best lightning and surge protection for telecommunication facilities?

When lightning strikes, relying solely on air terminals proves insufficient in effectively safeguarding telecommunication facilities. The best lightning and surge protection for telecom involves a synergistic combination of key components such as tower lightning rods, tower lightning arresters, and grounding systems.

What is a lightning protection system (LPS)?

3.2.3 lightning protection system (LPS): Complete system used to reduce physical damage due to lightning flashes to a structure. NOTE - An LPS consists of both external and internal lightning protection system.

How should a lightning protection System (RBS) be formed?

The earthing network of an RBS should be formed by a ring loop surrounding the tower, equipment room and fence, at a minimum. The mean radius re of this ring loop should be not less than I1, as indicated in Figure 1 and this value depends on the lightning protection system (LPS) class and on the soil resistivity.

Why are lightning and surge protection important for telecommunication networks?

In conclusion, systematic lightning and surge protection are imperative for the resilience and longevity of telecommunication networks. When lightning strikes, relying solely on air terminals proves insufficient in effectively safeguarding telecommunication facilities.

What is radio tower lightning protection?

Lightning rods serve as primary devices for safeguarding various structures against the destructive forces of lightning. Yet, the dynamics differ when it comes to the application of radio tower lightning protection.

How do antenna towers protect against lightning?

In urban areas where antenna towers coexist with tall structures like buildings and power towers, there is competition for lightning triggers. Taller structures, including antenna towers, offer a cone of protection, shielding shorter elements within the cone from direct strikes.

#### Lightning protection for power supply of communication base static

#### CN105375126A

The invention relates to a lightning protection grounding system of a communication base station. The lightning protection grounding system comprises a lightning rod, a grounding down lead, ...
