Liquid Cooling Battery Cabinet Assembly

Overview

What is power key smart liquid cooling integrated cabinet?

Power Key Smart Liquid Cooling Integrated Cabinet designed with highly integrated technology, with high flexibility in installation and application. You are looking for relevant information about this solution. Find a service point in your area to quickly solve your problem.

How does a battery cooling pump work?

Working principle of Liquid Cooling Battery Cooling: Cooling liquid powered by the pump will circulate inside battery modules and take the heat from batteries. When the liquid gets out of the battery modules, it became hot liquid with the heat from batteries. The hot liquid will circle back to a heat exchanging tank.

How many temperature detectors does a battery module have?

Each battery module has 8 temperature detectors. There are 2 racks that fit in a single battery cabinet, 9 slots in each battery rack to accommodate 8 battery modules and total 1 BSPU (Battery Switch & Protective Unit). Racks are connected in parallel and paired with a system BMS to meet the power and energy requirements of the application at hand.

What is a battery module made of?

The external casing is made of metal covered by insulating materials. For example, the top cover is made of PP, the bottom base is made of aluminum. The copper bars and screws are connected internally to prevent short circuit to ensure the electrical safety of the battery module. Each battery module has 8 temperature detectors.

What is a battery rack?

Each battery rack contains a rack-level BMS. The positive (+) and negative (-) terminals of the battery modules are clearly marked and are designed for the

convenience of connection, visual check, examine, and repair. The external casing is made of metal covered by insulating materials.
