Lithium battery pack in the computer room

Overview

Can lithium-ion batteries be used in data centers?

But, the situation has changed in recent years for lithium-ion batteries. Up until now, it was not viable to use them in the uninterruptible power supply systems of data centers since there was no reasonable balance between price, energy, capacity, safety, and reliability. Thanks to advancements in electric vehicles, this problem has been solved.

How to store a lithium ion battery?

Experts recommend to put the cells in storage mode after every run, this will help the battery to lengthen the usable life span. Remove the lithium-ion battery from a device before storing it. It is a good practice to use a lithium-ion battery fireproof safety bag or other fireproof container when storing batteries.

Should you use lithium-ion batteries for your ups?

Although UPS systems powered by lithium-ion batteries substantially reduce operating costs and the total cost of ownership, a large proportion of customers still use VRLA-time-tested solutions. This can be explained first of all by the fact that using lithium-ion batteries is only advantageous for a long-term perspective.

What are lithium ion batteries used for?

They power devices such as mobile telephones, laptop computers, tablets, cameras, power tools, electric vehicles, and machinery, and are also used in large Energy Storage Systems (ESS). Lithium-ion batteries may present several health and safety hazards during manufacturing, use, emergency response, disposal, and recycling.

Which batteries are used in data center ups power supply?

Currently, the batteries configured in data center UPS power supply are

mainly valve-regulated sealed lead-acid batteries (VRLA). However, with the development and improvement of battery technology, lithium batteries have gradually become one of the choices in the future.

Can lithium batteries be used in a micro-module data room?

Challenge 5: Fire protection problem. When lithium batteries are installed in a micro-module data room, if a fire breaks out in the lithium batteries, it is needed to control the fire within the cabinet and prevent it from spreading to surrounding ICT equipment.
