

SolarInvert Energy Solutions

Lithium battery packs used in medical applications

Overview

Lithium-ion batteries are essential to powering portable and implantable medical devices, from insulin pumps to automated external defibrillators (AEDs). Why do medical devices use lithium-ion batteries?

Medical devices demand highly reliable, safe, and long-lasting power sources to ensure continuous operation in critical environments. Whether in hospitals, emergency response units, or home healthcare settings, medical equipment relies on lithium-ion batteries for their high energy density, long cycle life, and lightweight design.

What are lithium batteries used for?

Lithium batteries are powerful and lightweight batteries used to power a wide range of devices. The medical device industry relies on lithium batteries for their ability to deliver energy to life-saving devices that require large amounts of power but that need to remain small in size for patients.

What packaging solutions are available for lithium batteries?

Air Sea Containers offers packaging solutions for shipping lithium batteries, including 4DV Plywood Boxes, which are ideal for batteries over 12kg. These dangerous goods packaging options have been tested and are compliant, providing flexibility to shippers transporting lithium ion or lithium metal batteries via road, sea, or air.

Are medical lithium-ion batteries safe?

Unlike consumer electronics, medical lithium-ion batteries must adhere to stringent safety and performance standards. A battery failure in a ventilator or an infusion pump can pose life-threatening risks. Therefore, selecting the right medical-grade lithium-ion battery is crucial for device manufacturers and healthcare providers.

Why is packaging a lithium battery important?

Proper packaging of lithium batteries is essential for their transportation. These batteries hold a charge that can cause them to short circuit, overheat, or catch fire if handled incorrectly. Having the proper packaging prevents accidental activation of these batteries and ensures safety throughout the entire handling and shipping processes.

What is UN approved lithium battery packaging?

Our packaging is UN-approved for the shipment of Lithium Ion and Lithium Metal Batteries. It is suitable for shipment via any mode of transport. Our packaging solutions for lithium batteries include:

Lithium battery packs used in medical applications

Lithium Polymer Battery Applications and Uses?

Lithium polymer batteries 1 are used in electronics, vehicles, drones, medical devices, and more--thanks to their high energy density 2, flexible shape, and ...
