Middle East lithium energy storage battery series connection method

Overview

Are lithium-ion battery energy storage systems relevant?

Requirements and associated risk factors are evaluated. The future relevant technological developments and market trends are assessed. Large-scale Lithium-ion Battery Energy Storage Systems (BESS) are gradually playing a very relevant role within electric networks in Europe, the Middle East and Africa (EMEA).

Are Li-ion battery systems economically feasible in the EMEA region?

The large-scale energy storage market is evolving at a very fast pace, hence this review paper intends to contribute to a better understanding of the current status of Li-ion battery systems focusing on the economic feasibility that is driving the realization of Li-ion BESS projects in the EMEA region. 1. Introduction 1.1. Motivation.

Is lithium-ion battery market poised for strong growth in Europe?

Interact Analysis, "Lithium-Ion Battery Market Poised for Strong Growth in Europe; Energy Storage Applications will be Fastest Growing Sector"; June 2019. [Online].

Are battery energy storage systems a viable solution?

Battery energy storage systems (BESS) are one viable solution. An advanced technological solution, they function by storing renewable energy which can then be used when power is required. They help address the challenge of intermittent renewable energy, and provide clean power 24 hours a day, no matter the weather conditions.

Why are large-scale Li-ion batteries becoming more popular in the EMEA region?

This magnification of large-scale Li-ion batteries showcases the increasing relevance of energy storage systems within electricity networks. The gradual

implementation of Li-ion BESS in the EMEA region has been following an exponential growth during recent years with an annual increase of almost 50 % .

Can energy storage technology compete with Li-ion batteries?

This will lead towards increased system performance as well as continuous cost reduction (limited by raw material prices). Nonetheless, there are several other energy storage technologies which are also being developed at a fast pace and might be able to compete or even surpass Li-ion batteries for specific use-cases.
