Mobile communication green base station protection distance

Overview

How to reduce interference between 5G base stations and FSS earth stations?

To reduce the interference between 5G base stations (BSs) and FSS earth station (ES), a guard band protection method is proposed. Additionally, the distance and angular protection methods are amalgamated. The performances are evaluated by simulation in realistic 3GPP. Also, the impacts of four antenna types are analysed for a 5G BS.

Does the 5G communication network coexist with a fixed-satellite service?

See further details here . In this paper, we investigate the coexistence of the 5G communication network with a fixed-satellite service (FSS) in the 3.5 GHz and 26 GHz frequency bands. We analyze a distance protection scheme for the FSS Earth station (ES) and 5G base stations (BS).

Do mobile phones need a base station?

Mobile phones and other mobile devices require a network of base stations in order to function. The base station antennas transmit and receive RF (radio frequency) signals, or radio waves, to and from mobile phones near the base station. Without these radio waves, mobile communications would not be possible.

Does 10 MHz guard band reduce exclusion zone size?

However, with 10 MHz guard band, the exclusion zone size can be reduced to 2 km for the omnidirectional antenna and 3 km for the 4 \times 4 array. For RMa, it is shown that the guard band of 10 MHz can reduce the size of the exclusion zone significantly.

What is a 5G base station?

A fifth generation of the technology (5G) is being introduced and reflects the latest evolution in mobile communications technology. Base stations are stationary radio transmitters with antennas mounted on freestanding masts or

on buildings.

Can guard band protection solve the interference for 5g/fss coexistence?

The numerical results show that the guard band protection can solve the interference for the 5G/FSS coexistence, when the distance protection is combined. In addition, when the hybrid protection method is employed, the coexistence between 5G BS and FSS ES is guaranteed. 1. Introduction
