

SolarInvert Energy Solutions

Modular design of on-site energy solar panels

Overview

Should solar panels be modular?

Comparison analysis between the modular design approach and the conventional solar panel design showed that the modular design required less costs to replace damaged components improving the performance and ease of repairability of the system. As is the case with any design and development work, there is always room for improvement.

Does modular solar panel design reduce system damage?

The modular design has proved effective in controlling and reducing system damage caused by such loadings. Comparison analysis between the modular design approach and the conventional solar panel design showed that the modular design required less costs to replace damaged components improving the performance and ease of repairability of the system.

Can a modular solar panel repair a damaged solar panel?

The modular design was tested for power transfer, re-connection upon impact and the ability to replace the selected parts in case of permanent damage without the need of replacing the entire solar panel. This experimental research work delivers a modular solar panel design that has ease of repairability in case of damage.

Are modular solar panels a viable alternative to traditional Plug-and-play solar panels?

From the presented experimental work, the following conclusions can be drawn. The presented modular solar panel design provides ease of replacement and repairability as compared to traditional plug-and-play one-time use solar panels commercially available in the market.

Can modular solar panels reduce electronic waste?

The research work brings to the attention of the reader an innovation modular

design for solar panel which can result in improved repairability and replacement of damaged parts thus leading to lower electronic waste. The presented solution can lead to the emergence of a new repair and maintenance job sector for the renewable industry.

What is the design philosophy of a modular solar cell assembly?

The design philosophy of the presented modular solar cell assembly is centred around ease of replacement and repairability.
