Mozambique Power Generation and Energy Storage

Overview

What is the optimal power system expansion plan for Mozambique?

The optimal power system expansion plan if wind and solar capacity are allowed to triple to reach almost 3 GW by 2032. Currently, the power system of Mozambique is separated into two transmission networks isolated from one another: the Central-Northern and Southern systems. Over 50% of the annual power demand is seen in the Southern system.

How can Mozambique achieve its electrification goal?

A power mix that takes advantage of its vast energy resources in a costeffective way and provides a solid foundation for the long-term development of its power system. The use of proven power generation technologies coupled with a well-structured and realistic data-driven plan will enable Mozambique to reach its electrification goal.

What is EDM doing in Mozambique?

EDM and Mozambique support the development of renewable energy projects, having launched public tenders for solar and wind projects, the country is also exploring battery storage solutions. The largest power generation plant in the country is the Cahora Bassa hydro dam, operated by the government owned Hidroeléctrica de Cahora Bassa (HCB).

Is battery storage a key technology for Mozambique's future?

Globeleq sees battery storage as a key technology for Mozambique's future. Storage costs are expected to continue decreasing, so those systems will become more competitive and will be able to contribute more.

How much electricity does Mozambique have in 2021?

Despite this huge generation potential only 38.6%1) of its population had access to electricity in 2021. The total installed power capacity in Mozambique stood at around 2,800 MW in the year 2021 whereas the peak demand

reported by the state-owned energy utility Electricidade de Moçambique (EDM) was at 1,035 MW.

When did Globeleq & Mozambique launch a solar power plant?

Our solar power plant in Cuamba was inaugurated in September of 2023. It marked another milestone for Globeleq and Mozambique, as it was the first IPP to integrate a utility-scale energy storage system.
