New Energy Storage in North Asia

Overview

How a new energy storage system is developing in China?

Dai Jianfeng, a deputy chief engineer of China Electric Power Planning and Engineering Institute, said the new energy storage in China has been developed through diverse technology routes. According to him, lithium-ion battery is still dominant at present, but the development of compressed air and liquid flow battery is accelerating.

What is new energy storage?

New energy storage refers to energy-storage technologies other than conventional pump storage, including lithium-ion batteries, liquid flow batteries, flywheel, compressed air, hydrogen and ammonia, as well as heat and cold energy storage.

Why is energy storage accelerating in China?

With the rapid growth of the installed scale of renewable energy, the power system's demand for various regulatory resources has been growing, leading to accelerating development of new energy storage in the country in recent years, said Liu.

How many kilowatts are in China's new energy storage projects?

[Photo/China Daily] The installed capacity of new energy storage projects that were put into operation during the first half of this year in China has reached 8.63 million kilowatts, equivalent to the total installed capacity of previous years in the country, according to the National Energy Administration (NEA).

How much money has China invested in energy storage projects?

In terms of investment scale, the newly operated new energy storage projects have driven direct investment of more than 30 billion yuan (\$4.2 billion) based on the current market price, said Liu Yafang, an official with the administration, during a conference held in Beijing on Monday.

How big is China's energy storage capacity?

FAST GROWTH According to a report recently issued by China Energy Storage Alliance (CNESA), by the end of 2022, China's cumulative installed capacity of new energy storage reached 13.1 gigawatts, with an annual growth rate of 128 percent.
