## Ngerulmud Air Compression Energy Storage Power Station

### **Overview**

What is a compressed air energy storage project?

A compressed air energy storage (CAES) project in Hubei, China, has come online, with 300MW/1,500MWh of capacity. The 5-hour duration project, called Hubei Yingchang, was built in two years with a total investment of CNY1.95 billion (US\$270 million) and uses abandoned salt mines in the Yingcheng area of Hubei, China's sixth-most populous province.

What is a 300 MW energy storage plant?

The \$207.8 million energy storage power station has a capacity of 300 MW/1,800 MWh and uses an underground salt cave. Chinese developer ZCGN has completed the construction of a 300 MW compressed air energy storage (CAES) facility in Feicheng, China's Shandong province. The company said the storage plant is the world's largest CAES system to date.

How long can a compressed air energy storage plant store electricity?

CEEC claims that the facility can store electricity for eight hours and release power over a five-hour period on a daily basis. The world's first 300-MW compressed air energy storage (CAES) demonstration plant has been connected to the grid, operating at full capacity in the central Chinese province of Hubei.

What is the largest gas storage facility in the world?

According to the company, which also installed the capacity, this is the largest operating site of the kind in the world. The Nengchu-1 facility is located in Yingcheng and utilises two underground caverns of an abandoned salt mine, reaching up to 600 metres of depth, which serve as gas storage units.

How much energy does nengchu-1 generate a day?

It can store energy for eight hours and release energy for five hours every day, and generate about 500 GWh of electricity annually. According to the

project operator China Energy Engineering Corp (CEEC), Nengchu-1 has set three world records in terms of the single unit power, energy storage capacity and conversion efficiency.

How much power does a new energy storage facility provide?

The \$207.8 million facility boasts an energy storage capacity of 300 MW/1,800 MWh and occupies an area of approximately 100,000 m2. According to ZCGN, it is capable of providing uninterrupted power discharge for up to six hours, ensuring power supplies to between 200,000 and 300,000 local homes during peak consumption periods.
