# North Korea s vanadium flow battery

#### **Overview**

Will Hyosung commercialise vanadium flow batteries in South Korea?

Vanadium flow battery supplier Invinity Energy Systems has signed a memorandum of understanding (MOU) with the power and industrial systems arm of Korean conglomerate Hyosung Corporation to commercialise its batteries in South Korea and elsewhere. Invinity announced the non-binding MOU with Hyosung Heavy Industries on Friday, 8 April.

How can vanadium redox flow batteries increase their share in energy storage?

Overcoming the barriers related to high capital costs, new supply chains, and limited deployments will allow VRFBs to increase their share in the energy storage market. Guidehouse Insights has prepared this white paper, commissioned by Vanitec, to provide an overview of vanadium redox flow batteries (VRFBs) and their market drivers and barriers.

Will flow battery suppliers compete with metal alloy production to secure vanadium supply?

Traditionally, much of the global vanadium supply has been used to strengthen metal alloys such as steel. Because this vanadium application is still the leading driver for its production, it's possible that flow battery suppliers will also have to compete with metal alloy production to secure vanadium supply.

What is vanited redox flow battery (VRFB)?

Confidential information for the sole benefit and use of Vanitec. Vanadium redox flow battery (VRFB) technology is a leading energy storage option. Although lithium-ion (Li-ion) still leads the industry in deployed capacity, VRFBs offer new capabilities that enable a new wave of industry growth.

Why are vanadium batteries so expensive?

Vanadium makes up a significantly higher percentage of the overall system cost compared with any single metal in other battery technologies and in addition to large fluctuations in price historically, its supply chain is less developed and can be more constrained than that of materials used in other battery technologies.

What is a redox flow battery?

Although there are many different flow battery chemistries, vanadium redox flow batteries (VRFBs) are the most widely deployed type of flow battery because of decades of research, development, and testing. VRFBs use electrolyte solutions with vanadium ions in four different oxidation states to carry charge as Figure 2 shows.
