

SolarInvert Energy Solutions

One less lithium battery pack

Overview

Is Aries II a good LFP battery?

The company has not only closed the gap but achieved a 20-30 percent energy density increase over typical LFP battery systems. With an energy density of 263 Wh/L and 162 Wh/kg, Aries II has achieved 34 percent and 23 percent improvements over the leading LFP pack benchmark.

What is our next energy's new battery pack?

REUTERS/ Rebecca Cook/File photo Purchase Licensing Rights Sept 13 (Reuters) - Michigan-based startup Our Next Energy has unveiled a new anodefree battery pack designed to slash cell cost as much as 50% while delivering up to 600 miles (965 km) of driving range, the company said Tuesday.

Is a lithium-ion battery cell anode-free?

ONE, a Michigan-based energy storage company, has unveiled a lithium-ion battery cell without an anode, which has an exceptionally high energy density.

Are LFP batteries better than NCM batteries?

"LFP batteries have many advantages over NCM batteries, including cost and durability, while using safer and more abundant materials," said Mujeeb Ijaz, CEO & founder of ONE. "The key shortfall has been range and energy density. By engineering a battery pack with similar energy density to NCM, ONE has made LFP a sustainable alternative.".

What is next energy's new battery chemistry?

Our Next Energy is working on two new battery types (the Aries and Gemini series), both of which start with a lithium iron phosphate (LFP) chemistry. The whiz-bang, 600-mile (966-km), dual-chemistry Gemini pack isn't due to go into production until 2025 or 2026, but ONE is currently testing its Aries II pack.

Will a new LFP battery close the energy gap?

The company claims that its battery has closed the gap in range and mass to within six percent of the leading benchmark nickel cobalt manganese (NCM) pack typically used in electric passenger vehicles. Achieving near energy density parity with NCM is a significant milestone for an LFP battery.
