Pack battery project construction schedule

Overview

The first step involves obtaining all documented information on the battery project that gets sent to our development team to review internally. We will then engage with the customer engineering group to discuss specific requirements for the batteries they require. This can take.

Next we work on completing the first draft of our battery pack project proposal. This is intended to outline all the information and requirements gathered during the.

As soon as the customer has received the proposal and reviewed it, we conduct a follow-up meeting to go over the specifics outlined in the scope of work. It's normal for.

Once the scope of work has been confirmed, the development process will begin. This includes designing the control circuitry, creating the Gerber data to manufacture the battery pack, creating the BOM for the project, procuring all the required materials to produce the prototypes, producing the prototype run on the PCBA's, testing, and.

Previously mentioned in the above section, the completion of a battery pack prototype can take anywhere from 4-14 weeks. The actual time of completion will depend on the complexity of the battery pack design, availability of materials, and battery cells. Prototypes are constructed and bench tested which are then submitted to the.
