Peak-shaving capacity of energy storage power stations

Overview

Energy storage (ES) can mitigate the pressure of peak shaving and frequency regulation in power systems with high penetration of renewable energy (RE) caused by uncertainty and inflexibility. However.

Can pumped storage power stations reduce peak shaving pressure?

Cheng et al. proposed a peak-shaving operation strategy for large-scale pumped storage power stations, which aims to reduce the peak shaving pressure on individual power grids and improve the solution efficiency of the overall model.

What is peak shaving & frequency regulation?

The strategy addresses the temporal demands of peak shaving and frequency regulation in the power grid. It quantifies the minimum capacity, power, rate and duration time requirements for energy storage stations to actively support the grid, helping the dispatch center make informed decisions and identify suitable stations for each demand scenario.

How to calculate peak shaving capacity cost?

When calculating the market share of the peak shaving capacity cost, deduct its energy storage device to promote its own new energy power station to absorb electricity. Later, the apportionment method will be adjusted according to the market operation.

Does es capacity enhance peak shaving and frequency regulation capacity?

However, the demand for ES capacity to enhance the peak shaving and frequency regulation capability of power systems with high penetration of RE has not been clarified at present. In this context, this study provides an approach to analyzing the ES demand capacity for peak shaving and frequency regulation.

What is peak shaving demand analysis?

Peak shaving demand analysis primarily provides the total peak shaving

power requirement, total peak shaving energy requirement and Continuous charging and discharging time for the energy storage cluster.

Can a retrofitted Cascade hydropower station be used for peak shaving?

The model is applicable to the peak shaving operation of the retrofitted cascade hydropower station. Novel linearization methods to enhance the efficiency of model solving. A 4.6% reduction in the peak-to-valley difference of residual load after retrofitting. Retrofitting the leading power station enables optimal peak shaving.

Peak-shaving capacity of energy storage power stations
