

**SolarInvert Energy Solutions**

# **Photogenic Solar Photovoltaic Panels**

## Overview

---

What is a photovoltaic (PV) cell?

A photovoltaic (PV) cell, commonly called a solar cell, is a nonmechanical device that converts sunlight directly into electricity. Some PV cells can convert artificial light into electricity. Sunlight is composed of photons, or particles of solar energy.

Which materials are used in thin films of photovoltaic cells?

Semiconductor materials ranging from “micromorphic and amorphous silicon” to quaternary or binary semiconductors such as “cadmium telluride (CdTe) and copper indium gallium selenide (CIGS)” are used in thin films of photovoltaic cells . Figure 12. Manufacturing process of a-Si-based solar PV cell . 2.3. Third Generation of Photovoltaic Cells.

What are the different types of photovoltaic technology?

There are four main categories that are described as the generations of photovoltaic technology for the last few decades, since the invention of solar cells : First Generation: This category includes photovoltaic cell technologies based on monocrystalline and polycrystalline silicon and gallium arsenide (GaAs).

What are new photovoltaic technologies?

Solar cell researchers at NREL and elsewhere are also pursuing many new photovoltaic technologies—such as solar cells made from organic materials, quantum dots, and hybrid organic-inorganic materials (also known as perovskites). These next-generation technologies may offer lower costs, greater ease of manufacture, or other benefits.

What is a second generation photovoltaic cell?

Second Generation of Photovoltaic Cells The thin film photovoltaic cells based on CdTe, gallium selenide, and copper (CIGS) or amorphous silicon have been

designed to be a lower-cost replacement for crystalline silicon cells.

What is 3rd generation photovoltaic technology?

Third Generation: This generation counts photovoltaic technologies that are based on more recent chemical compounds. In addition, technologies using nanocrystalline “films,” quantum dots, dye-sensitized solar cells, solar cells based on organic polymers, etc., also belong to this generation.
