Port Moresby 1500W off-grid solar power generation

Overview

How many power grids are there in Port Moresby?

Currently, there are two main separate power grids— in Port Moresby, and in the Lae–Madang–Highlands areas (the Ramu grid)—as well as a number of smaller grids servicing the smaller urban centers.

Why is power demand increasing in Port Moresby?

Recent estimates by PPL indicate the power demand growth has increased to about 10% per annum in Port Moresby as a result of recent economic activity, spurred primarily by the proposed LNG plant. A majority of the provincial urban centers cannot be connected to the two main grids due to PNG's geography.

Who owns the electricity grid in PNG?

PNG Power Ltd (PPL) owns and operates three major electricity grids (Port Moresby, Ramu and Gazelle) and mini grids in most provincial centres. PPL has exclusivity to a 10-kilometre radius around its existing grid infrastructure. This prohibits the establishment of any off-grid technologies within the 10 kilometre exclusivity zone.

Does Papua New Guinea have electricity?

Overview In Papua New Guinea (PNG), less than 10% of the population has access to electricity. Where power is available (generally in the main urban centers), the supply is often unreliable. Access to electricity is very limited in off-grid rural areas.

Did Astra solar install a solar system in Bougainville in 2022?

One-on-one training was conducted by IWE (I Want Energy) in Port Moresby for local Astra Solar staff in May 2022, in preparation for the Bougainville job. Four Astra Solar staff installed the systems in October, and tech support was offered remotely by IWE and Scott Sui from Sungrow in Sydney. Drone shot of

the solar installation.

How much power does PNG have?

PNG has about 580 megawatts (MW) of installed generation capacity, including hydropower (230 MW, or 39.7%), diesel (217 MW, or 37.4%), gas-fired (82 MW or 14.1%), and geothermal (53 MW or 9.1%). PNG has significant underutilized indigenous energy sources such as hydropower, natural gas, geothermal, and solar.
