

### **SolarInvert Energy Solutions**

# Portable energy storage overseas growth rate

#### **Overview**

The global portable energy storage system market was valued at USD 4.4 billion in 2024 and is expectations to reach USD 40.9 billion by 2034, growing at a CAGR of 24.2%. What are portable energy storage systems?

Portable energy storage systems provide a way to store excess energy generated from renewable sources and use it when needed, helping to balance the grid and reduce reliance on fossil fuels. The growing adoption of renewable energy sources is expected to continue to drive the demand for portable energy storage systems in the coming years.

Is China entering a new era of energy storage demand?

Mainland China accounts for most of the global energy storage demand, driven in the near term by regional requirements for new utility-scale wind and solar projects to include energy storage capacity. However, the Chinese market is entering an era of change.

What is portable energy storage systems (PESS)?

The market for Portable Energy Storage Systems (PESS) presents promising circumstances for players operating in this industry segment as a result of the growing need for dependable and easily transportable power sources for diverse applications.

What are the different types of energy storage systems?

Energy storage systems include pumped hydropower, electrochemical batteries, electromechanical storage, and thermal storage. More information on the global energy storage system market can be found here. Get notified via email when this statistic is updated. Access limited to Free Statistics.

What drives energy storage project development?

Globally, energy storage project development is increasingly driven by the utility-scale segment, with mandates and targeted auctions driving gigawatt-

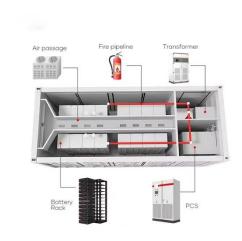

hour projects in markets like China, Saudi Arabia, South Africa, Australia and Chile.

How big will a new power plant grow this year?

BloombergNEF expects additions to grow 35% this year, setting a record for annual additions, at 94 gigawatts (247 gigawatt-hours), excluding pumped hydro.
