# Power generation from battery energy storage system for UK communication base stations

### **Overview**

Why is battery storage important in the UK?

As the UK intensifies its focus on decarbonising the electricity system, timely grid access for battery storage will be essential to support renewable energy integration, grid stability and meeting emission reduction targets. Related questions you can explore with Ask NCE, our new AI search engine.

What is tagenergy's 100MW battery project?

National Grid plugs TagEnergy's 100MW battery project in at its Drax substation. Following energisation, the facility in North Yorkshire is the UK's largest transmission connected battery energy storage system (BESS). The facility is supporting Britain's clean energy transition, and helping to ensure secure operation of the electricity system.

What is a tagenergy battery?

Owned and operated by TagEnergy – with Tesla, Habitat Energy and RES as project partners – the newly-connected battery will help exploit the clean electricity potential of renewable projects in the region, storing and releasing green energy to power homes and businesses and also helping to relieve any system constraints.

Can tagenergy energise a battery storage project?

A battery storage project developed by TagEnergy is now connected and energised on the electricity transmission network, following work by National Grid to plug the facility into its 132kV Drax substation in North Yorkshire.

Will there be a surge in battery energy storage projects?

There will be a potential surge in battery energy storage system (BESS) projects receiving grid connection offers before 2030 following regulatory reforms approved by energy regulator Ofgem, according to a new study.

Why is the Drax substation so important?

"Our Drax substation originally connected a coal plant in the seventies, and is now playing an important role in the energy transition – connecting not only the country's biggest battery, but also its largest biomass power plant.
