# Power tool lithium battery shortage

#### **Overview**

According to an Engineering.com report, most of our global lithium supply exists in Chile, Argentina, and Bolivia. Between strict controls and varying business policies, not enough mining of lithium exists to keep up with demand. Letting lithium mining go completely unchecked also.

As demand rises with the popularity and/or regulation of battery-powered cars and lawn equipment we expect the lithium-ion battery shortage to.

Now is not the time to go out and buy as many lithium-ion batteries as you can store. We aren't seeing issues with supply just yet, and prices seem fairly stable. You will pay a premium to.

Finally, manufacturers keep an eye on these things, and they're not waiting around to see what happens. years ago, Honda and GM partnered to work on the next generation of batteries with a focus on the automotive industry. Now, General Motors (GM) has.

Is there a lithium-ion battery shortage?

As demand rises with the popularity and/or regulation of battery-powered cars and lawn equipment we expect the lithium-ion battery shortage to start having a greater effect. On EV vehicles, people already experience longer wait times after placing an order. Of course, on the OPE side, most of the demand lies with consumer products.

Is there a lithium shortage?

The global battery supply chain may find lithium in shortfall again approaching the end of this decade. According to forecasts by S&P Global Commodity Insights, EV sales are set to reach 13.8 million in 2023, but will subsequently proceed to skyrocket to over 30 million by 2030. "We do fundamentally believe in a shortage for the lithium industry.

Will the world face a lithium shortage by 2025?

The world could face a shortage for lithium as demand for the metal ramps up, with some analysts forecasting that it could come as soon as 2025. Others,

however, see a longer time frame before that shortfall hits. BMI, a Fitch Solutions research unit, was among those that predict a lithium supply deficit by 2025.

What will happen to lithium in 2022-2023?

In the short to medium-term, deficits are expected for lithium in 2022-2023, whereas the global supply/demand market balance will be tight for nickel (by 2029), graphite (by 2024) and manganese (by 2025). By 2025, the EU domestic production of battery cells is expected to cover EU's consumption needs for electric vehicles and energy storage.

Will there be a supply shortage in 2022-2023?

Possible supply shortages will remain. In the short to medium-term, deficits are expected for lithium in 2022-2023, whereas the global supply/demand market balance will be tight for nickel (by 2029), graphite (by 2024) and manganese (by 2025).

Will China have a lithium supply deficit by 2025?

BMI, a Fitch Solutions research unit, was among those that predict a lithium supply deficit by 2025. In a recently published report, BMI largely attributed the deficit to China's lithium demand exceeding that of its supply.
