# Prices of n-type and p-type photovoltaic modules

#### **Overview**

How much does a resale solar module cost?

For example, N-Type modules by REC listed for resale in May and July pushed up weighted average prices to \$0.411 and \$0.460 respectively. P-Type modules in September increased to \$0.311 as modules by Sirius PV, Solar4America, and Panasonic were remarketed. The same price increase was present in P-Type Bifacials for the month of December.

What is the PV module price index?

The PV Module Price Index tracks wholesale pricing and supply of crystallinesilicon modules that have fallen out of traditional distribution channels, and as a result are listed for resale on the EnergyBin exchange.

What is PV moduletech USA?

PV ModuleTech USA, on 21-22 May 2024, will be our third PV ModulelTech conference dedicated to the U.S. utility scale solar sector. The event will gather the key stakeholders from solar developers, solar asset owners and investors, PV manufacturing, policy-making and all interested downstream channels and third-party entities.

Are n-type solar panels better than P-type?

N-type solar panels currently have achieved an efficiency of 25.7% and have the potential to keep on increasing, while P-type solar panels have only achieved an efficiency of 23.6%. Manufacturing costs represent one of the few disadvantages of N-type solar panels.

Do PV modules lose resale value?

For historical secondary market PV module pricing from 2020 through 2023, download the 2023 PV Module Price Index from EnergyBin's Resources portal. Overall, the price index shows that new PV modules don't tend to lose resale value in the U.S. secondary market unless their technology is older, such as

Legacy POLY modules.

What are p-type solar panels?

P-type solar panels are the most commonly sold and popular type of modules in the market. A P-type solar cell is manufactured by using a positively doped (P-type) bulk c-Si region, with a doping density of 10 16 cm -3 and a thickness of  $200\mu m$ .
