

SolarInvert Energy Solutions

Principle of photovoltaic protection for communication base stations

Application scenarios of energy storage battery products

Overview

The correct power supply for telecommunications relay stations, especially in areas where there is no electricity, is a handicap for operators to expand their clientele. It is on this sensitive topic that is taken.

Why do base station operators use distributed photovoltaics?

Base station operators deploy a large number of distributed photovoltaics to solve the problems of high energy consumption and high electricity costs of 5G base stations.

Can distributed photovoltaics promote the construction of a zero-carbon network?

The deployment of distributed photovoltaics in the base station can effectively promote the construction of a zero-carbon network by the base station operators. Table 3. Comparison of the 5G base station micro-network operation results in different scenarios.

Should 5G base station operators invest in photovoltaic storage systems?

From the above comparative analysis results, 5G base station operators invest in photovoltaic storage systems and flexibly dispatching the remaining space of the backup energy storage can bring benefits to both the operators and power grids.

What happens if a base station does not deploy photovoltaics?

When the base station operator does not invest in the deployment of photovoltaics, the cost comes from the investment in backup energy storage, operation and maintenance, and load power consumption. Energy storage does not participate in grid interaction, and there is no peak-shaving or valley-filling effect.

What is a 5G photovoltaic storage system?

The photovoltaic storage system is introduced into the ultra-dense heterogeneous network of 5G base stations composed of macro and micro

base stations to form the micro network structure of 5G base stations.

Does a 5G base station microgrid photovoltaic storage system improve utilization rate?

Access to the 5G base station microgrid photovoltaic storage system based on the energy sharing strategy has a significant effect on improving the utilization rate of the photovoltaics and improving the local digestion of photovoltaic power. The case study presented in this paper was considered the base stations belonging to the same operator.
