Recent price per Wh of photovoltaic energy storage system battery

Overview

How much does a battery storage system cost?

Around the beginning of this year, BloombergNEF (BNEF) released its annual Battery Storage System Cost Survey, which found that global average turnkey energy storage system prices had fallen 40% from 2023 numbers to US\$165/kWh in 2024.

How much does battery storage cost in 2024?

According to BNEF's Levelised Cost of Electricity report, the global benchmark cost for battery storage projects declined by a third in 2024 to USD 104 (EUR 100) per MWh, while the cost of a typical fixed-axis solar farm decreased by 21%. China's massive manufacturing capacity was a key driver behind cost reductions last year, the firm said.

How much does energy storage cost in 2023?

Energy storage costs are not forgotten in the report either. Citing BloombergNEF data, cost per kWh have fallen to \$165/kWh in 2023, down 40% from 2023, and half of the \$375/kWh with data on the ongoing falls in costs attributed to a less constrained supply chain, dramatically lower lithium prices, and increased competition and scale.

How much do EV batteries cost in 2023?

In early summer 2023, publicly available prices ranged from 0.8 to 0.9 RMB/Wh (\$0.11 to \$0.13 USD/Wh), or about \$110 to 130/kWh. Pricing initially fell by about a third by the end of summer 2023. Now, as reported by CnEVPost, large EV battery buyers are acquiring cells at 0.4 RMB/Wh, representing a price decline of 50%to 56%.

Are battery electricity storage systems a good investment?

This study shows that battery electricity storage systems offer enormous deployment and cost-reduction potential. By 2030, total installed costs could

fall between 50% and 60% (and battery cell costs by even more), driven by optimisation of manufacturing facilities, combined with better combinations and reduced use of materials.

How much will batteries cost in the next year?

In the current year, batteries are expected to fall below USD 100 per MWh, while global benchmarks for wind and solar generation are seen to decline by 4% and 2%, respectively. Image: BNEF
