Residential Solar Photovoltaic System in Hamburg Germany

Overview

How many homes in Germany have a photovoltaic system?

More and more households in Germany have already installed photovoltaics in recent years. By the end of 2023, one in eight residential buildings with one or two apartments had a photovoltaic system installed. Most installations are located in the south of Germany, where some regions already boast one in five dwellings with photovoltaics.

Why is solar power important in Hamburg?

Solar power is a crucial driving factor in both Hamburg and all of Germany to reach these renewable energy transition goals. Along with wind power and the generation of energy from biomass, solar power is one of the most important sources of clean, environmentally friendly, renewable energy.

Where are photovoltaics installed?

Most installations are located in the south of Germany, where some regions already boast one in five dwellings with photovoltaics. Global radiation as a measure of incident solar energy determines how much electricity a photovoltaic system can generate.

Are all regions in Germany suitable for rooftop photovoltaics?

Household rooftop photovoltaics, which accounted for more than half of all systems installed in Germany in 2023, play an important role here. But not all regions in Germany are equally suitable for their installation. The purpose of this study is to identify regions which still have a particularly high potential for new installations.

Who is home of solar?

Home of Solar (HOS) is an innovative project developer and investor in largescale photovoltaic systems. Founded in Hamburg in 2021 by two visionary young entrepreneurs, our mission is to transform unused rooftop spaces into

profitable solar energy projects – entirely cost- and risk-free for property owners.

What percentage of Germany's roof surfaces are equipped with photovoltaics?

So far, only a small percentage of Germany's roof surfaces is equipped with photovoltaics. Recently, however, a significant increase in the installation of such systems has been observed. In 2023 alone, photovoltaic systems were installed on 3% of residential buildings with one or two apartments.
