

## **SolarInvert Energy Solutions**

# Romania energy storage lithium battery price

### **Overview**

Are energy storage technologies commercially available in Romania?

This study investigated the feasibility of energy storage technologies that are commercially available on the Romanian market by using the levelized cost of storage (LCOS) method. The proposed approach also considers subsidies and different battery energy storage system' (BESS) technical parameters.

Can a battery be used in a PV system in Romania?

As the price for every kWh injected into the network and battery energy storage system (BESS) costs are dynamic, the household and industrial consumers who want to integrate a battery in their PV system may have difficulties choosing between the commercially batteries available on the Romanian market.

Are there commercially available batteries on Romanian market?

The analysis presents the commercially available batteries on Romanian market, the technical performances of each battery, the costs involved in this decision, the opportunity to reduce their investment and indicates the most profitable battery obtained after LCOS method is performed.

How much money will Romania get for battery storage projects?

The financial support in the form of direct grants was announced by the government in November 2022, reported by Energy-Storage.news at time, and will go towards at least 616MWh of battery storage projects. The European Commission has approved a €103 million state aid scheme from the government in Romania for battery storage projects.

Are battery technologies profitable in Romania?

Profitability evaluation for 5 types of battery technologies in Romania. BESSs costs were obtained from Romanian market analysis. LCB technologies are the most feasible from the examined BESSs. A sensitivity analysis with respect to

cost parameters is presented. The variation of capital expenditure has the highest influence on LCOS values.

How much LCoS does a battery cost in Romania?

To be considered profitable, the LCOS of the battery must be less or equal to electricity unit price paid by the customer. The electricity price considered for Romania is 0.1734 €/kWh, which is the average price in the first quarter of 2021, according to EU statistics .
