

### **SolarInvert Energy Solutions**

# Rooftop communication green base station construction application

### **Overview**

What is a green base station solution?

The green base station solution involves base station system architecture, base station form, power saving technologies, and application of green technologies. Using SDR-based architecture and distributed base stations is a different approach to traditional multiband multimode network construction.

How ACS cooled a base station can save energy?

Compared with a traditional equipment room, an ACS-cooled room can save up to 70% energy. A sharp decrease in power consumption in a base station makes it possible to replace the traditional electrical power supply with solar or wind energy. Among other solutions, solar and hybrid solar-wind power has gradually been applied in base stations.

Why is a base station important?

Environmental protection is a global concern, and for telecom operators and equipment vendors worldwide, developing green, energy-saving technologies for wireless communications is a priority. A base station is an important element of a wireless communications network and often the main focus of power saving in the whole network.

How can a soft base station reduce power consumption?

The 2G/3G swapping project of a leading telecom operator in Asia-Pacific is a good example of how power consumption can be reduced using the SDR soft base station platform. In the old network, one base station used three cabinets for GSM900, GSM1800, and UMTS2100 devices. Its overall power consumption was 4280 W.

How much power can a base station supply using wind?

2:8 to 5:5. But in any case, power supplied using wind cannot exceed 50% of the total power supply. The green base station solution involves base station

system architecture, base station form, power saving technologies, and application of green technologies.

What should a base station do in a wireless communications network?

In a wireless communications network, the base station should maintain high-quality coverage. It should also have the potential for upgrade or evolution. As network traffic increases, power consumption increases proportionally to the number of base stations. However, reducing the number of base stations may degrade network quality.

### Rooftop communication green base station construction application

## **Green Base Station Solutions and Technology**

Mar 20, 2011  $\cdot$  The green base station solution involves base station system architecture, base station form, power saving technologies, and application of
