Seoul Energy invests in energy storage power generation project

Overview

Will South Korea install 540 megawatts of battery energy storage systems?

The Ministry of Trade, Industry and Energy unveiled plans for a nationwide tender to install 540 megawatts of battery energy storage systems (BESS), marking the country's first major government-led deployment of its kind. The project is part of a broader effort to modernize South Korea's power grid and support the transition to renewable energy.

What is the Solar City Seoul project?

South Korea's capital is one of the world's most innovative smart cities and is currently engaged in a number of initiativespushing to make it greener and more sustainable. One of them is the Solar City Seoul project, which aims to deploy solar panels to 1 million householdsin order to achieve 1 GW of installed solar PV.

What is Gyeongsan substation - battery energy storage system?

The Gyeongsan Substation – Battery Energy Storage System is a 48,000kW lithium-ion battery energy storage project located in Jillyang-eup, North Gyeongsang, South Korea. The rated storage capacity of the project is 12,000kWh. The electro-chemical battery storage project uses lithium-ion battery storage technology.

Why is South Korea launching a 540mw battery energy storage tender?

South Korea is ramping up its battery energy storage deployment with a new 540MW tender to stabilize the grid and support renewable energy growth. Learn how this move strengthens both domestic resilience and global market leadership.

What is South Korea's Green Energy Plan?

The initiative is closely tied to South Korea's 11th Basic Plan for Electricity Supply and Demand, which outlines an aggressive ramp-up in renewables.

The plan aims to boost the share of green energy from 8.4 percent of the national energy mix in 2023 to 29.2 percent by 2038.

Why should South Korea deploy long-duration storage?

Deploying long-duration storage will allow Korea to capture surplus renewable energy during these off-peak periods and shift it to peak demand hours, reducing curtailment and maximizing asset utilization. This tender fits within South Korea's broader decarbonization roadmap.
