### Solar Photovoltaic Panel First-Class Agent

#### **Overview**

What is a photovoltaic (PV) system?

A photovoltaic (PV) system converts solar energy into usable electricity and is currently the most popular means of solar energy use 1, 2. In 2019, the total installed capacity of solar PV panels worldwide reached 600 GW and it is projected that the global PV capacity will reach 1,500 GW by 2025 and 3,000 GW by 2030 (ref. 3).

What are the different types of PV panel cooling technologies?

Current PV panel cooling technologies can be divided into two categories: active cooling and passive cooling 12, 13, 14. Active cooling uses a coolant such as water or air to dissipate heat from the surface of a PV panel 15, 16, 17.

What is the IEA photovoltaic power systems programme?

The IEA Photovoltaic Power Systems Programme (IEA PVPS) is one of the TCP's within the IEA and was established in 1993. The mission of the programme is to "enhance the international collaborative efforts which facilitate the role of photovoltaic solar energy as a cornerstone in the transition to sustainable energy systems.".

What is the cooling component in a solar PV system?

The cooling component in the design is an atmospheric water harvester (AWH). The AWH collects atmospheric water vapour by a sorption-based approach in the evening and at night, and then the sorbed water is vaporized and released during the day by using the waste heat from the PV panel as energy source 27, 28, 29, 30.

Can a sorption-based atmospheric water Harvester cool a photovoltaic panel?

In this report we demonstrate a new and versatile photovoltaic panel cooling strategy that employs a sorption-based atmospheric water harvester as an

effective cooling component.

What is AWH-assisted PV panel cooling?

AWH-assisted PV panel cooling is widely applicable to all kinds of PV installation on any scale, from a single household to large industrial PV farms, and thus is a meaningful contribution to the ongoing effort to fight climate change.
