Solar Photovoltaic Water Pump Control System

Overview

Is solar photovoltaic water pumping system feasible?

Solar photovoltaic water pumping system (SPVWPS) has been a promising area of research for more than 50 years. In the early 70s, efforts and studies were undertaken to explore the possibility of SPVWPS as feasible, viable and economical mean of water pumping.

What is direct driven solar PV water pumping system?

Direct driven solar PV water pumping system is shown in Fig. 4. In this system, electricity generated by PV modules is directly supplied to the pump. The pump uses this electric power to pump the water. As no backup power is available, the system pumps water during the daytime only when the solar energy is available.

What is a solar water pump?

A solar water pump theoretically consists of three key components: a pump control system that may be just an on-off switch or may be a more complex electronic unit, a motor and the pump; however, in practice they are considered as one unit and generally called the "water pump" or in this guideline the "solar water pump".

What is solar photovoltaic-based water pumping system (spvwps)?

Several sectors including agriculture and farming rely on renewable sourcebased water pumping due to recurrent hikes in fossil fuel prices and contaminant environment. In recent decades, a solar photovoltaic-based water pumping system (SPVWPS) has been a more popularly chosen technique for its feasibility and economic solution to the end-users.

What are the advantages of a solar PV water pumping system?

The advantage of the AC water pumping system is that it can run even on grid power in case of non-availability of PV power during night hours or during

cloudy days. Induction and synchronous AC motors are used to run the pump. Fig. 5. Schematic of a solar PV water pumping system. 3.3. Basis of types of pumps.

What is a photovoltaic water pump system?

The Photovoltaic water pump system, powered by photovoltaic panels, generates electricity to power the water pumping system. Figure 3 illustrates a schematic of an IoT (Internet of Things) based water management system. The key components in the smart water management system are as follows: 1.

Solar Photovoltaic Water Pump Control System

Design and control of a standalone PV water pumping system

Sep 2, 2017 · Photovoltaic (PV) is the main power source, and lead acid batteries are used as energy storage system, to supply a water pump driven by a BLDC motor. The proposed ...
