

SolarInvert Energy Solutions

Solar Pump Circulation System

Overview

What is a circulation pump?

These pumps are included in our solar water heating packages, and are used to circulate heat transfer fluid in the primary or secondary solar hot water loops. We have a number of circulation pump solutions for all types of applications, from single family home hot water systems, to industrial heating and air conditioning systems.

What is a forced circulation solar system?

A forced circulation solar system is a solar thermal installation in which water circulates within the circuit driven by a pump. Unlike solar installations with a thermosiphon, this system does not move hot water to the highest point of the closed circuit, but rather makes it go down from the solar collectors to where the storage tank is located.

What is a solar pump station?

These solar pump stations are used on the solar loop of a solar thermal system to circulate the heat transfer fluid through the array. They are also used to control the temperature in your solar storage tank. The pump inside the solar pump station is activated by a signal from a solar differential controller.

What are solar panels plus pumping solutions?

Solar Panels Plus provides a number of different pumping solutions for solar hot water and solar space heating systems. These pumps are included in our solar water heating packages, and are used to circulate heat transfer fluid in the primary or secondary solar hot water loops.

How does a solar pump station work?

The pump inside the solar pump station is activated by a signal from a solar differential controller. The dual pump station (shown on left) contains both a

flow and return connection, and are widely used on most solar thermal systems. A single line return connection pump station is also available.

How do solar thermal systems work?

In these solar thermal systems, the water that circulates between the solar collectors and the accumulator cannot do so by natural convection since the hottest water is already at its highest point. To do this, you will need a conventional water pump and, therefore, an external electrical power source.

Solar Pump Circulation System

Solar DC Circulation Pump

Solar hot water circulating pump is widely used in solar whole house hot water system, solar water heater, hot water circulation, floor heating, cooling system ...
