

## SolarInvert Energy Solutions

# Solar System Motor

## Overview

---

How does a solar motor work?

How the solar motor works. An electric motor transfers electrical energy into mechanical energy. The solar motor is a small direct current (dc) electric motor. Electricity flows through the motor in one direction only. The motor is sealed for life but we've taken one apart to look at how it works. Identifying the working parts.

Why do solar panels need a motor?

By optimizing the angle of the panels, these motors help maximize the amount of sunlight captured, thereby increasing the overall efficiency of the solar power system. The motors used in these systems need to be precise, reliable, and capable of operating under various environmental conditions.

Where are solar powered DC motors made?

MET Motors manufactures all of its Solar Powered DC Motors in our plant in Winnebago, MN since 1969. If you have an application for a Solar DC Motor, just send us your specifications and we will be glad to send you a no obligation quote.

What are the dimensions of a solar powered motor?

Our Solar Powered Motor physical dimension ranges from 3.3" in diameter up to 6.0" in diameter.

How many HP can a solar motor produce?

The output of our Solar Motor can range from fractional horsepower up to 2 HP.

Can a solar panel motor run if the Sun is not shining?

Our Solar Panel Motor can run when the sun is not shining, but this option

requires a battery charge controller. This system allows our Solar Electric Motor to run consistently all of the time. How can our team help you to design an efficient solar system?

## Solar System Motor
