Solar container refrigeration

Overview

What is solar refrigeration technology?

Solar refrigeration technology Solar refrigeration offers a wide variety of cooling techniques powered by solar collector-based thermally driven cycles and photovoltaic (PV)-based electrical cooling systems. Fig. 1 shows a schematic diagram of a solar thermal cooling system.

Can solar energy provide refrigeration?

The use of solar energy to provide refrigeration is rather less intuitive. The power from the sun intercepted by the earth is approximately 1.8×10^{11} MW, which is much larger than the present consumption rate on the earth of all commercial energy sources.

What is a thermoelectric solar refrigerator?

A thermoelectric solar refrigerator is different from the refrigerators commonly used today. It operates based on thermoelectric cooling technology and does not require a compressor, evaporator, condenser, or any pump. Instead, a solar panel is used for power supply.

How much energy does a refrigerated container use?

Good question, let's work it out. Energy consumption for a refrigerated container depends on a bunch of different factors (set-point temperature for the cooled space, ambient conditions, system efficiency, etc.), but the "Container Handbook" suggests an average value of 3,600 W per TEU which sounds good to me.

Can a reefer be powered by solar?

Since it's impossible for the sun to hit every side of a container at once, powering an average reefer entirely by solar is just not possible. Unless we change the energy consumption of the system that is. Since there is no sense in covering the entire reefer in solar, let's consider just using the top.

Can a solar Reefer reduce the cost of perishable goods?

Reefers have enabled a global supply chain of perishable goods, but it comes at a high-energy cost. A solar reefer could help reduce this cost, but with current technology it won't eliminate it. As solar panel performance and strength improves it's worth revisiting. Soon a solar reefer may shift from a mere novelty to a new standard.
