

### **SolarInvert Energy Solutions**

### Solar on-site energy plus energy storage system

#### **Overview**

Solar-plus-storage (pairing solar with a battery storage system) is an optimal solution to solar's intermittency, because the battery storage system can store solar energy when there is a surplus for times when there's a deficit (like when it's cloudy or the sun has set). What is a solar-plus-storage system?

Simply put, a solar-plus-storage system is a battery system that is charged by a connected solar system, such as a photovoltaic (PV) one. In an effort to track this trend, researchers at the National Renewable Energy Laboratory (NREL) created a first-of-its-kind benchmark of U.S. utility-scale solar-plus-storage systems.

How can on-site solar PV & energy storage improve sustainability?

To achieve sustainability goals while meeting the increasing electricity demands of electrification, organizations are pairing on-site solar PV generation with on-site energy storage. These systems, which are considered as "behind-the-meter" (BTM) systems, allow facilities to maximize the benefits of on-site renewable generation.

Are solar-plus-storage systems a key pillar of energy transition?

As the global climate crisis intensifies and renewable energy technologies advance, Solar-Plus-Storage systems are emerging as a core pillar of energy transition. These systems are not just tools for households and businesses to reduce electricity costs—they are essential for grid stability, energy independence, and achieving net-zero carbon goals.

Can on-site storage be used alongside solar PV?

If a utility restricts the exports from a facility to the grid, the use of on-site storage alongside solar PV can provide a solution to avoid costly infrastructure upgrades, thus increasing the feasibility of larger on-site PV installations.

What are the benefits of an on-site solar PV system?

For the scenario represented in the graph, an on-site solar PV system allows the facility to reduce the amount of electricity drawn from the grid during the middle of the day. Increasing the amount of solar PV production on-site can provide additional cost and emission reductions and resiliency benefits for facilities.

How many energy storage systems are there in the US?

According to GTM Research's "U.S. Energy Storage Monitor 2017 Year in Review," more than 5,500 energy storage systems are installed in the U.S., in the residential and commercial sectors with over 95% connected to PV in the residential sector at the end of 2017, which amounts to about 4,700 systems.
