### Solar power station in China in Denmark

#### **Overview**

How does the Danish Energy Agency work with China?

The Danish Energy Agency has worked with the Chinese government on a green energy transition since 2005. The cooperation focuses on supporting China in building a stable, flexible, cheap and green energy system to avoid catastrophic climate change.

How much electricity does Denmark generate from wind and solar power?

Denmark generated half of its electricity from wind and solar power in 2020. That's the highest number ever. Denmark began looking into the possibilities of wind energy after the oil crisis of 1973.

What is Denmark's energy source?

More than two-thirds of Denmark's renewable energy comes from bioenergy, which is energy stored in organic material or biomass. Agriculture is big business in Denmark, and it indirectly helps provide energy too, with manure, animal fats, and straw used as the basis for biogas and liquid biofuels.

Why is bioenergy important in Denmark?

Moreover, bioenergy plays an important role in the Danish energy system. Clean energy is a Danish passion. Today, 50 per cent of electricity in Denmark is supplied by wind and solar power. Wind energy is well-established in Denmark, which long ago decided to put the Danish climate's constant breezes and blusters to practical use.

What does the Danish Energy Agency do?

In the field of district heating, the Danish Energy Agency and our partners work with pilot cities in Chinese provinces, providing training to local officials to improve heat planning and sharing Danish expertise to facilitate the integration of heating into the overall energy system.

When did wind energy start in Denmark?

Denmark began looking into the possibilities of wind energy after the oil crisis of 1973. A nascent wind turbine industry emerged as a spin-off of the manufacturing of agricultural machinery, and the first commercial wind turbine was erected in 1979. The success of onshore wind power inspired the development of offshore wind energy.
