# South Sudan communication base station energy management system is in place

#### **Overview**

What is the grid-based electricity situation in South Sudan?

At present, the grid-based electricity situation in South Sudan is characterized by routine power outages and lack of efficiency in the distribution system . In fact, in 2020, 580 GWh or nearly  $100\,\%$  of electricity was produced from oil and gas, and just  $1\,$  GWh from renewable sources .

Why is South Sudan unable to build a centralized grid?

Despite having an abundance of oil, South Sudan has struggled to build its grid. Ongoing conflict, geographical distance, ethnic differences, and more practical factors including lack of capital all play a role. This has led the government to adopt plans for a centralized grid, which it is unable to execute in a timely fashion.

Which institutions provide important services in South Sudan?

In addition to households, this study examined energy demand for three types of institutions that provide important services in South Sudan, 1) health, 2) edu-cational, and 3) government and NGO ofices.

What is South Sudan's role as a power utility?

Its role as a power utility is expected to intensify as programmes to increase electricity access in South Sudan are implemented. It is proposed under the Electricity Bill 2015 as the regulatory entity for the electricity sector in South Sudan. It would function as the energy regulator whose functions would include the creation of regulations.

Is result based financing a solution to South Sudan's energy crisis?

Result Based Financing (RBF) to accelerate access to energy services, an instrument commonly used in other markets to bridge the aford-ability gap, is also lacking in South Sudan. The energy sector's policy and enabling regulatory en-vironment is still in its formative stage, especially for the of-grid

sector.

Does South Sudan have a decentralized power system?

Most decentralized power systems in South Sudan are operated by private companies, NGOs and humanitarian organizations in South Sudan. In assessing the capacity of the off-grid electricity in terms of Megawatt (MW), the kVA rating of the generators and the power factor were taken into consideration.
