Southern Europe Solar Air Conditioning Recommendations

Overview

Summer air conditioning represents a growing market in buildings worldwide, with a particularly significant growth rate observed in European commercial and residential buildings. Heat-driven cooling technol.

What is SACE (solar air conditioning in Europe)?

The SACE (Solar Air Conditioning in Europe) project was initiated in early 2002 and conducted over the next 2 years by a group of researchers from five countries, supported by the European Commission.

Are solar cooling systems economically feasible?

Tsoutsos et al. present a study of the economic feasibility of solar cooling technologies. Karagiorgas et al. investigated the application of renewable technologies in the European tourism industry and identified a large number of solar thermal systems but only a few solar cooling systems.

Does solar air conditioning save energy?

Conclusions Solar air conditioning has a strong potential for significant primary energy savings. In particular, for southern European and Mediterranean areas, solar assisted cooling systems can lead to primary energy savings in the range of 40–50%. Related cost of saved primary energy lies at about 0.07 €/kW h for the most promising conditions.

What is solar cooling?

ermal energy.EXAMPLES OF APPLICATIONSSolar cooling is suitable for residential, commer ial, institutional and industrial use. The solar cooling supply is equal to the demand: when the sun is at its hottest solar irradiation is high, the maximum energy is ailable and the demand is also high. A typical solar cooling system also provides space.

Can solar thermal energy be used for air conditioning?

rly suited for sunny and dry climates. Nevertheless, it can be applied in other climates, as solar thermal energy can be used for air conditioning in the

summer, having a perfect correlation between the increase in comfort cooling demand in summer and.

Why is solar cooling important in summer?

ore than 75% were installed in Europe.From an energy system point of view, it should be taken into account that solar cooling can signi in summer due to rising cooling demandas well as high fo TSTemperature6°C to 20°C (cool ng)Average cooling temperature range. The temperature required from the solar thermal plant changes accor
