Space Energy Base Station

Overview

What is space-based solar power (SBSP)?

The concept of space-based solar power (SBSP) has been around for decades, but China is the first country actively working to build an operational system. Here's how it works: Solar panels in space collect sunlight – Unlike Earth-based solar farms, space stations are not affected by clouds, weather, or nighttime.

How do space-based solar power stations work?

“This is an incredible project to look forward to.” Space-based solar power (SBSP) stations work by using a system of mirrors to concentrate sunlight onto panels, which then generate electricity. The electricity is then converted to microwave radiation and beamed to a fixed antenna on Earth.

What is space-based solar power?

Space-Based Solar Power, SBSP, is based on existing technological principles and known physics, with no new breakthroughs required. Today's telecom satellites transmitting TV signals and communication links from orbit are basically power-beaming satellites – except at a far smaller scale of size and power.

What is China's space-based solar power project?

China is on a bold mission to revolutionize renewable energy through its Space-Based Solar Power (SBSP) initiative. The plan involves constructing a colossal 1-kilometer-wide solar power station in geostationary orbit, approximately 36,000 kilometers above Earth.

Can a solar power station be positioned in space?

In contrast, a solar power station positioned in space can receive constant, unobstructed sunlight, leading to significantly higher energy collection efficiency. Experts estimate that solar intensity in geostationary orbit is about

ten times greater than that on Earth's surface.

Will China build a solar power station in space?

It's coming to a cosmos near you in 25 years! China is currently planning to build a gigantic solar power station in space. To get parts of the array out of our atmosphere, scientists are working on a reusable heavy lift rocket called the Long March-9. The solar array project is just one small part of China's larger space mission.
