

SolarInvert Energy Solutions

Spain Solar Range

Overview

Can Spain achieve 62 GW of solar power by 2030?

In order to attain its newly expanded goal of having 62 GW of wind power and 81 GW of solar power installed by 2030, Spain will need to hasten its pace of renewables deployment and overcome obstacles: permitting bottlenecks, anemic growth in rooftop solar, and infrastructure limitations that impede demand.

How much solar energy does Spain have in 2024?

GEM data show that as of May 2024, Spain already has 29.5 GW of utility-scale solar energy installed, and 7.8 GW under construction, accounting for 60% of the country's target of 57 GW of utility-scale solar PV and 5 GW of solar thermal installations by 2030.

Is solar energy a renewable resource in Spain?

Although wind is currently the most used renewable resource in the Mediterranean country, solar energy is growing at a very fast pace. In fact, the solar capacity installed has more than quintupled in the last five years. In 2023, Spain was the sixth country worldwide in terms of new capacity additions.

Which region in Spain has the most solar projects?

Given the country's geographical characteristics, northern Spain has the lion's share of operating and prospective wind projects, in regions such as Aragón, Galicia and Castilla y León. Solar projects are more concentrated in southern and central regions including Extremadura, Andalucía and Castilla-La Mancha.

Why does Spain have so many wind and solar power?

The abundance of wind and solar in Spain's energy mix reflects natural geographical advantages and years of deliberate policy decisions to promote renewables over fossil fuels. Spain was one of Europe's renewable energy

pioneers, installing more than 20 GW of wind power in the early 2000s.

Where are solar and wind projects located in Spain?

Utility-scale solar and wind projects are widely distributed throughout Spain. Given the country's geographical characteristics, northern Spain has the lion's share of operating and prospective wind projects, in regions such as Aragón, Galicia and Castilla y León.

Spain Solar Range

The story behind Spain's solar power meltdown

Spain has built so much solar capacity that at certain times of day it produces far more electricity than it needs. Prices have plunged as a result, dragging down owners' profits with them.
