

### **SolarInvert Energy Solutions**

# Specifications of photovoltaic container substation

#### **Overview**

What is a container substation?

An intelligent solution for obtaining direct current quickly and economically is provided by container substations. By integrating the equipment in a modular housing and undertaking rigorous testing off site, Siemens is able to supply fully built and tested modular traction power substations to a consistent and high level of quality.

What is a transformer substation container?

A transformer substation container consists of three parts: low-voltage room, transformer room, and medium-voltage room. The LV cabinet is located at the LV room inside the step-up substation. It is used to converge and transmit low voltage from the inverter to the step-up transformer and feed it into the MV grid.

How many kV is a substation rated output voltage?

Rated output voltage from 20 kV to 36 kV, more available upon request. Extra features are available that the standard product doesn't contain, more options upon request. When ambient temperature ≥55oC, an extended roof will need to be installed onto the substation on site by the customer.

What is the scope of supply for containerized Mobile substations?

The scope of supply covers the complete assembly which may include: Containerized mobile substations are sheltered and address applications in challenging environmental conditions including areas of high pollution, and humidity.

How does a step-up substation work?

Our step-up substation converts low-voltage AC power generated by the PV inverter into medium-voltage AC power and feeds it into the power grid. The Brunstock Electric step-up substation integrates a ring main unit, transformer,

low-voltage cabinet and auxiliary power supply into a steel container.

What is a containerized mobile substation?

Containerized mobile substations are sheltered and address applications in challenging environmental conditions including areas with high pollution, high humidity, extreme temperatures or sand storms. Containers are easy to transport and fast to install, by reducing foundation works as well as installation and commissioning effort on site.
