St John s UET All-Vanadium Flow Battery

Overview

What is a vanadium flow battery?

When commissioned, the Vanadium Flow battery will provide peak-shaving and enhance grid stabilization. UniEnergy anticipates even more storage capacity in the future to facilitate additional intermittent renewable energy deployment in the region.

Which energy storage facility is launching a 'vanadium flow' battery in China?

UniEnergy Technologies and Rongke Power plan to deploy one of the biggest energy storage facility, an 800 MWh flow battery, in the Dalian peninsula in northern China. When commissioned, the Vanadium Flow battery will provide peak-shaving and enhance grid stabilization.

Can Rongke Power's vanadium flow batteries be used in China?

The China National Energy Administration has approved the application of Rongke Power's vanadium flow batteries into the utility grid based on competitive pricing and lack of emissions, as well as demonstrated longevity and operational flexibility.

What are vanadium redox flow batteries?

Vanadium redox flow batteries are one of the most promising chemistries, because of vanadium's ability to maintain different states of charge as a standalone element, unlike other chemistries like zinc-bromine or iron-chromium.

What is the largest flow battery in the world?

As technical advances drive flow batteries closer to commercialization, what appears to be the largest flow battery in the world is being prepared for deployment in China.

What is a flow battery?

A flow battery, such as the UniEnergy battery, separates power and energy. Power is produced in a reversible fuel cell, while the energy resides in the vanadium electrolyte stored in large tanks. This design results in a commercial battery with a long, four-hour lifetime and little degradation.
