

SolarInvert Energy Solutions

Statistics on the number of energy storage projects implemented

Overview

In the past year, a total of 81.4GWh of energy storage projects were tendered, and 66.2GWh of installed capacity was completed, with a high degree of overall project fulfillment, reaching 81.3%, an increase of 10.3% month-onmonth. How has the energy storage industry changed over the past year?

2. The degree of project fulfillment has increased rapidly In the past year, a total of 81.4 GWh of energy storage projects were tendered, and 66.2 GWh of installed capacity was completed, with a high degree of overall project fulfillment, reaching 81.3%, an increase of 10.3% month-on-month.

How will energy storage affect global electricity production?

Global electricity output is set to grow by 50 percent by mid-century, relative to 2022 levels. With renewable sources expected to account for the largest share of electricity generation worldwide in the coming decades, energy storage will play a significant role in maintaining the balance between supply and demand.

How many new energy storage projects are commissioned in China?

Figure 2: Cumulative installed capacity of new energy storage projects commissioned in China (as of the end of June 2023) In the first half of 2023, China's new energy storage continued to develop at a high speed, with 850 projects (including planning, under construction and commissioned projects), more than twice that of the same period last year.

How a domestic energy storage system compared to last year?

In the first half of the year, the capacity of domestic energy storage system which completed procurement process was nearly 34GWh, and the average bid price decreased by 14% compared with last year. In the first half of 2023, a total of 466 procurement information released by 276 enterprises were followed.

What is the cumulative installed capacity of energy storage projects?

The cumulative installed capacity of new energy storage projects is 21.1GW/44.6GWh, and the power and energy scale have increased by more than 225% year-on-year. Figure 1: Cumulative installed capacity (MW%) of electric energy storage projects commissioned in China (as of the end of June 2023).

What types of energy storage are included?

Other storage includes compressed air energy storage, flywheel and thermal storage. Hydrogen electrolysers are not included. Global installed energy storage capacity by scenario, 2023 and 2030 - Chart and data by the International Energy Agency.
