

#### **SolarInvert Energy Solutions**

#### Syria Energy Storage Station Fire Fighting Solution

#### **Overview**

Is Syria's energy system in ruins?

Syria's energy system is in ruins. To rebuild energy security the country's new government faces two major challenges. The first, vital for Syria's swift recovery and political stability, is bringing reliable flows of electricity and fuel to its people.

Can the EU help Syria regain energy security?

Syria has many challenges. Energy is one. The EU can be part of the solution with a strong offer supporting domestic electricity generation and long-term energy system integration. Syria's energy system is in ruins. To rebuild energy security the country's new government faces two major challenges.

What if Syria doesn't have reliable energy supplies?

The lack of reliable energy supplies is a major concern for Syrian citizens and its new government, making it a key point of leverage. Qatar and Türkiye have stepped in to provide short-term assistance. The two states have provided two floating power stations, while Türkiye is also connecting its grid to Syria.

Can Syria match all-purpose energy demand with wind-water-solar (WWS)?

This infographic summarizes results from simulations that demonstrate the ability of Syria to match all-purpose energy demand with wind-water-solar (WWS) electricity and heat supply, storage, and demand response continuously every 30 seconds for three years (2050-2052).

Are energy storage systems flammable?

These systems combine high energy materials with highly flammable electrolytes. Consequently, one of the main threats for this type of energy storage facility is fire, which can have a significant impact on the viability of the installation.

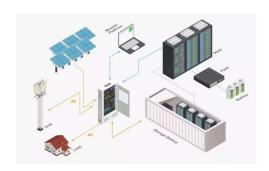

What is a Li-ion battery energy storage system?

Li-ion battery energy storage systems cover a large range of applications, including stationary energy storage in smart grids, UPS etc. These systems combine high energy materials with highly flammable electrolytes.
