

#### **SolarInvert Energy Solutions**

# The function of the substation energy storage battery is

#### **Overview**

Their primary purpose is to supply backup power during outages, support grid regulation, and ensure continuous operation of protective systems. Why do substations need batteries?

Batteries play a crucial role in the smooth and efficient operation of substations, ensuring that power systems remain stable and reliable. These batteries work in conjunction with battery chargers to provide essential backup power, support communication systems, and enhance overall substation automation.

What is a substation battery?

Substation batteries provide backup power for critical systems like protective relays, circuit breakers, and communication equipment during grid outages. They ensure grid stability, enable safe shutdowns, and support emergency operations. Common types include lead-acid and lithium-ion, designed to meet reliability standards like IEEE 450.

How is battery energy storage system connected at primary substation?

BESS at primary substation Battery energy storage system may be connected to the high voltage busbar (s) or the high voltage feeders with voltage ranges of 132kV-44 kV; for the reliability of supply, substations upgrades deferral and/or large-scale back-up power supply.

What types of batteries are used in substations?

In this article, we'll explore the types of batteries used in substations, their functions, the benefits they offer to modern power systems, and their applications in field devices like reclosers. Flooded Lead-Acid Batteries: These are the traditional type of lead-acid batteries, known for their reliability and durability.

What is a battery energy storage system?

A battery energy storage system is of three main parts; batteries, inverter-based power conversion system (PCS) and a Control unit called battery management system (BMS). Figure 1 below presents the block diagram structure of BESS. Figure 1 – Main Structure a battery energy storage system.

How long does a battery last in a substation?

VRLA batteries typically last 10-12 years, while lithium-ion can exceed 15 years with proper maintenance. Can Substation Batteries Be Recycled?

Yes. Lead-acid batteries have a 99% recycling rate. Lithium-ion recycling processes are evolving but less widespread. Do Substations Use Solar-Powered Batteries?
