

### **SolarInvert Energy Solutions**

# The size of the tiles that can be used for solar power in Venezuela

#### **Overview**

What are solar tiles?

Solar tiles are roofing materials that can produce energy directly from sunlight. Solar tiles are integrated into the roof itself and function as both a roofing substance and a source of energy, as opposed to conventional solar panels, which are mounted on top of an existing roof.

What are photovoltaic roof tiles?

Photovoltaic roof tiles or shingles are roof tiles with integrated solar cells used for roof covering, either in combination with standard roof tiles or shingles, or as a standalone solution. They are tightly integrated into the roof.

What are solar tiles & how do they work?

Solar tiles are an innovative way to harness renewable energy directly on your roof. In this article, you will discover everything you need to know about these photovoltaic tiles and how they can transform your home into a source of clean and sustainable generation.

How to choose a solar roof?

Compared to conventional roofing materials, solar tiles often contribute greater weight. Thus, a sturdy roof is necessary to support the load. Energy production is a crucial factor to consider when selecting solar tiles. Think about solar tiles' electricity output, which is between 25W and 114W.

What is the difference between solar tiles and traditional solar panels?

One of the main differences between solar tiles and traditional solar panels lies in their aesthetic appearance. While solar panels are installed on additional structures on the roof, solar tiles are integrated directly into the roof, giving them a more aesthetic and discreet appearance.

Are solar tiles good for a roof?

Solar tiles are made to complement flat concrete tile profiles and mix in with the roof plane. They are also suitable for restoring structures in historic or conservation-protected regions because they may use more of the roof's surface to produce the most electricity. Some solar tiles are strong enough to endure winds that reach 140 mph in speed.
