Togo off-grid photovoltaic power generation system

Overview

Will the government of Togo pay for off-grid solar?

Since March 2019, the Government of Togo is offering subsidies to Togolese households to cover the cost of off-grid solar power systems. This subsidy will cover the high upfront cost of the solar systems and aims to increase the adoption of solar home systems.

Is wind energy a viable alternative to solar energy in Togo?

Compared to solar energy, wind energy is making a tentative start in Togo. So far it has only been used to pump groundwater. Initial explorations had shown that the Togolese wind resource is not competitive compared to other sources on utility-scale.

Which power plant increases Togo's electricity production capacity?

This power plant increases Togo's electricity production capacity by 50%. Blitta Solar Plant The Sheikh Mohamed Bin Zayed solar power plant or Blitta's solar plant (located in the central region, 262 km from Lomé) was built by AMEA Togo Solar, a subsidiary of AMEA Power, and inaugurated in June 2021.

Does Togo have electricity?

While around four-fifths of urban areas now have access to electricity, only around a tenth of Togo's rural areas are electrified. The electrification rate is lowest in Savanes, the country's northernmost region. In off-grid areas, electricity is rarely used for productive purposes.

How is rural electricity steered in Togo?

In Togo, rural electricity projects are steered by the Rural Electrification and Renewable Energy Agency. Several companies, including BBOXX, EDF, and Sun King-Soleva, are actively working to promote universal access to electricity by developing innovative technologies and providing solar energy services to communities not connected to the grid.

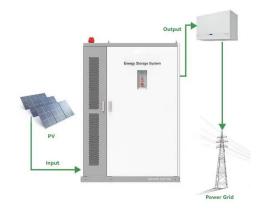

Will Togo achieve 100% electricity coverage by 2030?

In its first phase, the project should reach 33,000 households. Togo hopes to achieve 100% electricity coverage by 2030, against 59% now. By then, the share of renewables in the energy mix should be 50%, according
